

MUSIC GENRE SPOTIFICATION

Abhijit Suresh
Paria Rezaeinia
Sahana Sadagopan

PROBLEM STATEMENT

- Classify music into its corresponding genres.
- Not straightforward to compare distance between two songs
- Curse of dimensionality.

Classical: 320 songs

Electronics: 115 songs

Jazz/blues: 26 songs

Metal/punk: 45 songs

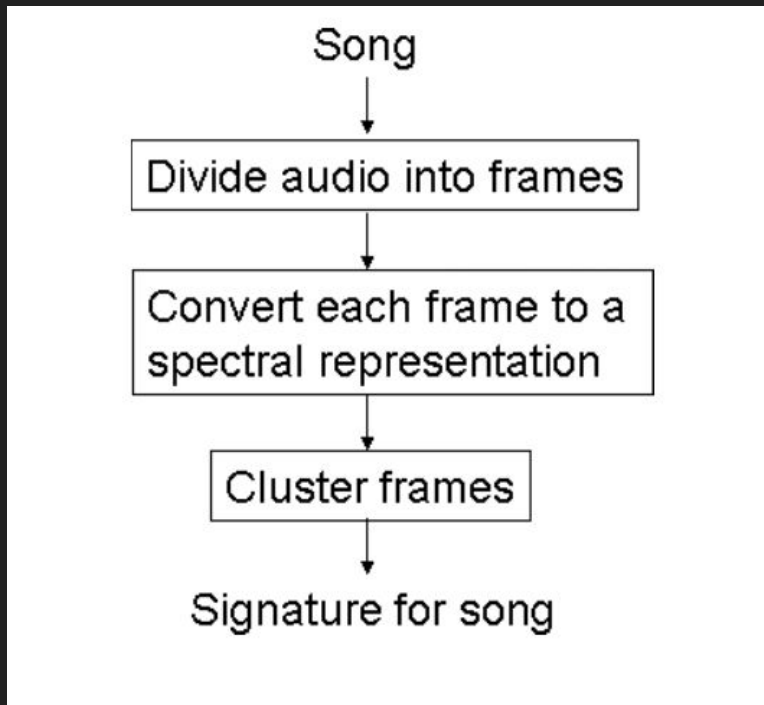

Rock/pop: 101 songs

World: 122 songs

OVERVIEW OF OUR APPROACH

- Dimensionality reduction
 - Mel Frequency Cepstrum Coefficients (MFCC)
 - Principal Component Analysis (PCA)
 - k-Means
 - Multidimensional scaling
 - Gaussian Mixture (Modified)
- Distance calculation
 - Minowski distance
 - Earth Movers distance
 - Euclidean distance
 - Kullback-Leibler distance (KL) distance
- Classification
 - Neural Network
 - k- Nearest Neighbours (kNN)

Approach 1: Content based similarity method

Johnson lindenstrauss $n > 77$ (79)

Euclidean distance

A Content-Based Music Similarity Function

Beth Logan Ariel Salomon

$$P = \{(\mu_{p_1}, \Sigma_{p_1}, w_{p_1}), \dots, (\mu_{p_m}, \Sigma_{p_m}, w_{p_m})\}$$

Approach 1: Earth Mover's distance

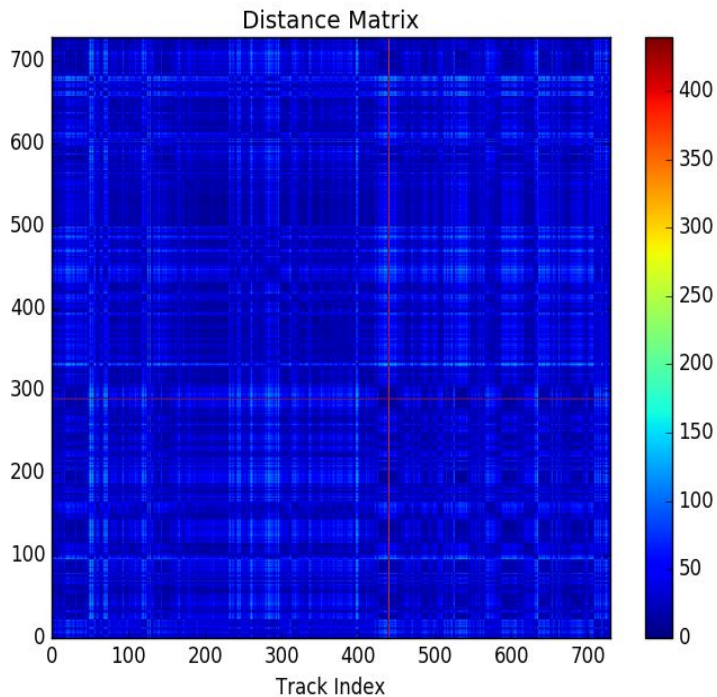

- The earth mover's distance (EMD) is a measure of the distance between two probability distributions over a region D
- It is also known as the Wasserstein metric.

$$EMD(P, Q) = \frac{\sum_{i=1}^m \sum_{j=1}^n f_{i,j} d_{i,j}}{\sum_{i=1}^m \sum_{j=1}^n f_{i,j}}$$

$$\sum_{i=1}^m \sum_{j=1}^n f_{i,j} = \min \left(\sum_{i=1}^m w_{pi}, \sum_{j=1}^n w_{qj} \right)$$

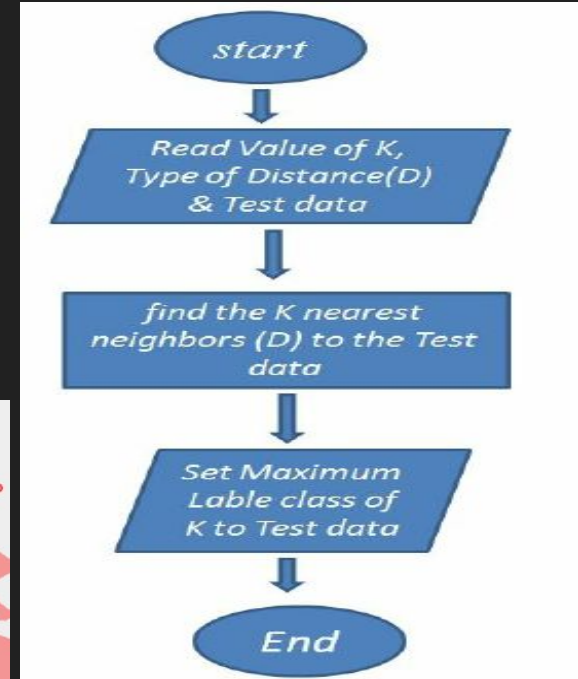

$D = [d_{i,j}]$ be the ground distance between clusters p_i and q_j .

Approach 1: Multidimensional scaling

Classification of Approach 1: kNN

- The Distance vectors are taken which are in metric space
- Supervised Method of learning algorithm
- sorts the distance and determine k nearest neighbors based on the k-th minimum distance
- Accuracy: 54%

Cross Validation

We have used 10-cross validation for our results

- 90% of the data was taken as training data and 10% was taken as test data in case of KNN classification method

This was performed 10 times to predict the efficiency.

Classification of Approach 1: Confusion matrix (n = 20)

Accuracy = 54%

	Classical	Electronic	Jazz-blues	Metal-punk	Rock-pop	world
Classical	0.6491	0.1403	0.017	0.035	0.035	0.122
Electronic	0.3333	0.6666	0	0	0	0
Jazz-blues	0	0	0	0	0	0
Metal-punk	0	0	0	0	0	0
Rock-pop	0	0.2	0.2	0	0	0.6
World	0.125	0.125	0	.0	0.25	0.5

Gaussian Mixture Model

- A parametric probability density function
- A weighted sum of Gaussian components density
- Individual component densities model the underlying set of hidden classes

Approach 2: FFT Distance Matrix

Approach 2: Example

Audio file

FFT
Distance
Matrix
Algorithm

Distribution

Kullback-Leibler divergence metric

- A measure of distance between two probability distributions

$$D(P || Q) = H(P, Q) - H(P)$$

- Not symmetric

Distance Matrix

Approach 2 : Distance matrix

Confusion matrix (d = 30)

Accuracy = 52%

	Classical	Electronic	Jazz-blues	Metal-punk	Rock-pop	world
Classical	.8329	.0919	0	0	.0111	.0641
Electronic	.5182	.3636	0	0	.1	.0182
Jazz-blues	.4231	0	0	.0769	.3077	.1923
Metal-punk	.4286	.0612	0	.0612	.1224	.3265

world	.6522	.0543	.0109	.0109	.0217	.25

Confusion matrix (d = 50)

Accuracy = 57%

	Classical	Electronic	Jazz-blues	Metal-punk	Rock-pop	world
Classical	.8319	.0551	0	0	.0377	.0754
Electronic	.6106	.2832	0	.265	.0619	.0177
Jazz-blues	.1304	0	0	.2609	.087	.5217
Metal-punk	.4750	.075	0	.125	.15	.175
Rock-pop	.5109	.0543	0	.0217	.2609	.1522
world	.5701	.0187	.0093	.0187	.0561	.3271

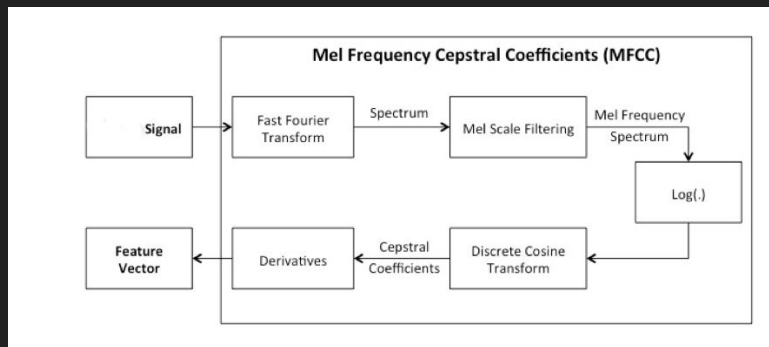

Confusion matrix (d = 50), modified kNN

Accuracy = 63%

	Classical	Electronic	Jazz-blues	Metal-punk	Rock-pop	world
Classical	.5821	.1422	.0228	.0998	.0717	.0814
Electronic	.0442	.7876	.0531	.0708	.0177	.0265
Jazz-blues	0	0	1	0	0	0
Metal-punk	0	0	0	.8448	.0345	.0345
Rock-pop	.0648	.0463	.1019	.1019	.6759	.0093
world	.0283	.0943	.1698	.1038	.1321	.4717

Approach 3 : MFCC and PCA

- MFCC or Mel Frequency Cepstrum Coefficients

- PCA or Principal Component analysis
 - Identify principal components
 - The transformation is defined in such a way that the first principal component has the largest possible variance. This applies for the rest of components.

Approach 3 : Distance Matrix

Classification of Approach 3: NEURAL NETWORK

Forward propagation-backward propagation model of neural network

Neural network Training

The Input was taken as the Songs of all 6 genre and the Target data as the distance matrix for features.

The Parameters that play a role in Neural Network

- The Interconnection Patterns
- Learning Process for updating weights
- Activation function

Neural Network

Algorithms

Data Division: Random (dividerand)
Training: Levenberg-Marquardt (trainlm)
Performance: Mean Squared Error (mse)
Calculations: MEX

Classification of Approach 3: Results

The Confusion Matrix obtained For neural network method classification

Training Confusion Matrix							
Output Class	1	2	3	4	5	6	
	357 62.5%	8 1.4%	16 2.8%	24 4.2%	38 6.7%	48 8.4%	72.7%

	2 0.3%	1 0.1%	1 0.1%	2 0.3%	0 0.0%	0 0.0%	33.3%
	30 4.1%	0 0.0%	6 0.8%	4 0.5%	27 3.7%	12 1.6%	34.2%
	3 0.4%	0 0.0%	0 0.0%	1 0.1%	0 0.0%	2 0.3%	33.3%
Target Class	1	2	3	4	5	6	

Results

The Accuracy level for different approaches after cross validation are shown below:

Dimensionality Reduction Technique	Distance Calculation	Classification Method	Efficiency Obtained (After Cross Validation)
Content based similarity method	Earth Mover Distance	KNN algorithm	54%
Gaussian Mixture (Modified)	Euclidean Distance	KNN Algorithm	57%
Gaussian Mixture (Modified)	Euclidean Distance	Modified - KNN Algorithm	63%
MFCC & PCA	Euclidean Distance	Neural Network Algorithm	65%

SUMMARY

- Importance of Dimensionality reduction
- The genre that were easily classified

Classical genre

Classical Genre composes nearly 50% of the data set given

- The genre that were classified badly

Jazz was the one classified the worse

Only 3% of the data is Jazz

NEXT STEPS

- When Clustering frames, we could try using Kullback leibler (KL metric) instead of euclidean distance.
- Use particle swarm optimization in order to find the optimal set of synaptic weights for classification.
- Try the algorithm on a different dataset where the genre types are distributed uniformly.

THANK YOU

Francois Meyer
